- Writing back-end code and building efficient PHP modules.
- Integrating data storage solutions.
- Designing the web pages with HTML, CSS.

**Projects**

**C# | Online Shopping Application**

- In this project there is two panels, one is Admin and other is User.
- Admin can Add the new products in the inventory Section and see how many quantity is sold out.
- User can select the products and save it into the cart and placed the order.
- I worked on the admin section which add the new items and change the discount on per products with including taxes.
- All the products are stores in the database with their prices, and the number of quantity of single products sold also stored at the back-end.
- In the project there is a team of three developers.

**React Js |  Search a Music**

- In this project the user can search the song as their choice from Front-end  then searched track is fetched from the internet, and displays on the user screen.
- I worked on the part to search a track on google with the use of API.
- In this project there is a team of  three developers.

Jaskaran Singh                              (514) 576 1704                         jas17karan@gmail.com

**HTML, CSS | Restaurant Website**

- Basically, in this project I developed only a static website with the use of HTML and CSS language.
- I designed the website with the use of various tags of HTML, then I applied a CSS over that tags to made more attractive.
- I also use a google maps in the contact us Page to find the location of the restaurant, and I also give different effects on the images of food.
- I developed this website by my own.
